Education

University of Nottingham – Msci Computer Science with Artificial Intelligence

2022 -2026

– Predicted: 2:1

Key Modules: Programming and Algorithms, AI-methods, Software Engineering Group Project, Programming Paradigms

De Ferrers Sixth Form

2020 – 2022

A Level: Computer Science (A), Mathematics (A), Physics (B)

Work Experience

BOOTS, CUSTOMER ADVISOR

June 2024 – present

- Provide excellent customer service by listening, offering helpful advice, and anticipating their needs with thoughtful gestures.
- Familiarize yourself with our in-store offers and actively promote them to keep customers well-informed.
- Collaborate with the team to create a positive shopping experience by maintaining a clean, presentable store everyone can take pride in.

BJSS- Spotify Albums

September 2023 - May 2024

- I lead a team of 8 people, organising and managing sprint plans and retrospectives to provide project deliverables on time.
- I made use of scrum approach with 2-week sprint cycles to make steady progress.
- Full stack developer utilizing React and the Spotify API to develop a tournament bracket-style game between albums on Spotify.
- I also served as a main source of communication between the client (BJSS) and us throughout the project

HEWLETT-PACKARD (HP), SOFTWARE ENGINEERING VIRTUAL EXPERIENCE

June 2023 – August 2023

- Wrote a proposal for a RESTful web service to manage a list of employees.
- Built a web server application in Java Spring Boot that can accept and respond to HTTP requests and support uploading JSON data.
- Developed and ran a set of unit tests to assess my Java Spring Boot application's performance.

BRIGHT NETWORK, IEUK 2023: TECHNOLOGY

July 2023

- Completed a 4-day virtual internship with Bright Network, enhancing my understanding of tech concepts and trends. Engaged in discussions with professionals from PwC, Amazon, Google, and Vodafone, enriching my industry knowledge and networking skills.
- Tackled Lloyds Banking Group's Net Zero challenge for SMEs by developing a low-fidelity environmental app prototype, focusing on budget and environmental impact, featuring innovative tools like a Carbon Footprint Calculator and Sustainability Recommendations.

Notable Projects

SOFTWARE ENGINEERING GROUP PROJECT

- Modelled requirements of the system using UML diagrams and used Gitlab to manage the code and documentation.
- Designed high-fidelity prototypes as part of the specification.
- Implemented CI/Continuous Integration in the process of making the software.
- Set up a Kanban board to manage tasks between team members.

HYFLEX-COMPATIBLE UAV ANIMAL FEEDING PROBLEM SOLVER

- Implemented a HyFlex-compatible problem domain for the UAV Zoo Feeding (UZF) problem, optimizing UAV travel to minimize feeding time across animal enclosures.
- Developed a selection hyper-heuristic that dynamically applies low-level heuristics, including Adjacent Swap, Reinsertion, and Partially Mapped Crossover, to improve solution quality.
- Designed and tested a suite of heuristic-based optimization techniques, ensuring efficient instance loading, solution representation, and adaptive decision-making.

RESTAURANT BOOKING ASSISTANT NLP-BASED CHATBOT

- Developed an NLP-based chatbot in Python to facilitate restaurant bookings, modifications, and cancellations while also handling small talk and general knowledge queries using intent matching and Named Entity Recognition (NER).
- Developed an NLP-based chatbot in Python to facilitate restaurant bookings, modifications, and cancellations while also handling small talk and general knowledge queries using intent matching and Named Entity Recognition (NER).
- Conducted usability testing and performance evaluation, achieving 82.9% accuracy in intent classification and incorporating conversational design principles for improved user experience.

HEART DISEASE PREDICTOR

- Using a sample of patient data in a dataset, I built a machine learning model to predict whether a patient has heart disease or not based on appropriate input features from the dataset.
- Constructed decision trees and ANNs to analyse heart disease probability; conducted thorough evaluation to identify the more precise predictive model for health assessments.

Skills

- **Programming Languages:** Java, C, Spring Boot, REST API, SQL, PHP, Python
- **Tools & Technologies:** Windows, Linux (Ubuntu), MySQL, IntelliJ, Visual Studio, Eclipse, Git, Jira
